

DRYING AND FILLING

HyFlex™ Paper and Guttapercha Points

The well-established HyFlex CM and HyFlex EDM NiTi file lines include perfectly matching paper and guttapercha points to facilitate an optimal treatment process.

HyFlex paper and guttapercha points are optimally matched to the HyFlex CM and HyFlex EDM files and thus contribute to the best possible treatment result. They correspond to the respective sizes and have the perfect taper to dry and obturate root canals previously prepared with HyFlex files precisely and as quickly as possible.

The size of the point can be easily identified by the Top Color colour coding and the length of ≥ 28 mm allows the points to be inserted up to working length. The points are available in special assortments or as individual sizes.

- Precise fit
- Colour-coded
- Highest quality
